SeedBomb ASA Limited – Seed Purchase Steps Plan

**We recommend you use a smart phone for all of these steps.**

| Step | Instructions | Reason |
|---|---|---|
| 1) | You first need to buy some Algos on a crypto exchange (e.g. Coinbase).<br><br>If you don't have an account with an exchange already, you can a) set one up, or b) ask a friend with an account to purchase them for you. | SeedBomb is an Algorand Secured Asset which is available on the Algorand blockchain. Seeds must be acquired by swapping Algos (until we are able to get an exchange listing). |
| 2) | Set up an Algorand Wallet using this link or by downloading the phone app – follow the instructions for creating a new account. The phone app is used for easy integration with Tinyman (as seen in Steps 5 and 6 below). | This is required so that you can store your Algos and your Seeds. |
| 3) | Send your Algos from your exchange account to your Algorand Wallet. This is done by:<br>1. Opening Algorand Wallet, pressing on the symbol with two green arrows (or pressing where your wallet lists "Algos"), and asking to "receive" assets.<br>2. Copying the code which appears. This is a combination of letters and numbers and is your public wallet address.<br>3. Going to your exchange and opting to "send" money. Select your Algos and paste the public address obtained in the previous step and hit send.<br>4. Open your Algorand Wallet and check the Algos have landed. This usually takes less than 10 seconds to occur. | The Algorand Wallet is the place where you can keep your Seeds. You cannot hold these on an exchange until SeedBomb obtains an exchange listing. |
| 4) | Go to the "Add Asset" option within your Algorand Wallet.<br><br>Click "Add Asset".<br><br>Add SeedBomb ASA by including the asset ID: 523605642. This incurs a very small transaction fee (Algorand has very low fees).<br><br>SeedBomb should now be visible in your Algorand Wallet. | This is so that your Wallet can receive Seeds, allowing you to swap your Algos for Seeds and enter them into the Liquidity Pool, as required at Step 5. |
| 5) | Before learning how to swap, a few key points to note:<br>1. You can swap all of your Algos if you would like to. This, however, will remove Seeds from the Liquidity Pool (and store them in your Wallet). Maintaining liquidity is critical in the early stages of an asset. To help the success of the asset, you can instead swap a proportion of your Algos. We have swapped 2/3rds of our | This is how you can obtain Seeds for Algos in your wallet. A swap of Algos for Seeds will increase the price of Seeds, whereas a swap of Seeds for Algos will decrease the price of Seeds. |

**We recommend you use a smart phone for all of these steps.**

|  |  |  |
|---|---|---|
|  | Algos and reserved 1/3 to put into the Liquidity Pool.<br>2. The Liquidity Pool is key to the success of SeedBomb. If there is sufficient liquidity, the asset will be much more likely to succeed. Providing liquidity to the Liquidity Pool is optional. The benefits are highlighted for explanatory purposes, and you should consider your own circumstances before making any decision.<br>3. The Liquidity Pool process is outlined in more detail in Step 6.<br><br>Swap your Algos for Seeds using the Tinyman App:<br>1. Open Tinyman through your smart phone browser.<br>2. Connect your wallet using the "Connect to a Wallet" button.<br>3. Select Algorand Mobile Wallet<br>4. Select the Wallet you wish to connect to and press "Connect".<br>5. Reopen your browser on Tinyman; your wallet should now be connected.<br>6. The top box should have Algorand, the bottom box will be empty. Click the bottom box and select "see all", uncheck "hide unverified assets" and search for SeedBomb using the SeedBomb asset ID: 523605642.<br>7. Input the number of Algos you wish to swap – remember that you will likely want to hold some back for the Liquidity Pool – you will see an approximation of the number of Seeds you will receive. Press "Swap".<br>8. This will open your Algorand Wallet app. You should approve the transaction and then return to Tinyman in your browser to check the transaction has been successful. If the transaction is successful, the Seeds should be visible in your Algorand Wallet. If numerous transactions are occurring at the same time as yours, the transaction may fail due to the change in the price of Seeds to Algos and you will need to try again from Instruction 6 above. | If you are a visual learner, you may find the Tinyman tutorial on connecting your wallet here and swapping here, more helpful. |
| 6) | As mentioned at the start of Step 5, the Liquidity Pool is a key component of a successful DeFi asset. Providing liquidity requires you to place both Algos and Seeds into the Liquidity Pool in exchange for | As mentioned at the start of Step 5, the Liquidity Pool is a key component of a successful DeFi asset. Liquidity is necessary for the |

Liquidity Pool Tokens. This is why you retained some of your Algos in Step 5.1.

1. Open your browser to Tinyman and if required, reconnect your Algorand Wallet.
2. At the bottom of the webpage, you should see the word "Pool", which you should select.
3. On that page, press "Add Liquidity". This will open a page which appears similar to the Swap set up, Algos on the top and a box on the bottom. As with swapping, please select the bottom box, select "see all", deselect "hide unverified assets" and search for SeedBomb using the asset ID: 523605642.
4. At this point you will be prompted to "opt in". Select that option and it will open your Algorand Wallet app.
5. Confirm that you wish to opt in and reopen your browser to the Tinyman page. Once the transaction is confirmed as successful, you can check your Algorand Wallet and should see "TinymanPool 1.1 SEEDS-ALGO". This is so that you can receive Liquidity Pool Tokens, which entitle you to a percentage of the assets in the liquidity pool determined by the amount of Algos and Seeds that you provide to the Liquidity Pool.
6. You can now go back to your Tinyman app, input the number of Algos you wish to input into the Liquidity Pool and this will automatically generate the equivalent value in Seeds. Note that these Seeds and Algos will go into the Liquidity Pool in exchange for Liquidity Pool Tokens.
7. Select "add liquidity", then "confirm supply".
8. This will open your Algorand Wallet for you to confirm the transaction. Select confirm and, once the transaction settles, you are done.

successful trading of an asset. If you provide liquidity to you also get passive income from the assets in the pool, and are still entitled to a percentage of assets in the pool.

We would recommend that you learn about impermanent loss at this stage, particularly reading this article here and watching this video here.

If you are a visual learner, you may find the Tinyman tutorial on adding to the Liquidity Pool more useful which is found here.
